William John Hunt Jr.

Senior Full Stack Software Engineer

Sunbury, NC 27979 | (757) 506-8279 | contact@williamhuntjr.com | linkedin.com/in/williamhuntjr | github.com/williamhuntjr | www.williamhuntjr.com

SUMMARY

Senior full-stack engineer with 7+ years building and running production web applications in React, TypeScript, Vue/Nuxt, Node.js, Python, and PHP. Helped lead a large marketplace platform migration at Trader Interactive, and founded and operate GrubStack, a subscription SaaS platform I built end to end, from React front ends and REST APIs to payment integrations and Kubernetes infrastructure. Scrum Master, mentor, and contributor to team hiring.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, PHP, HTML5, CSS3, Bash

Frontend: React.js, Next.js, Vue 3, Nuxt.js, Pinia, Material UI, Less/SASS, SSR/SSG, Responsive Design

Backend & APIs: Node.js, Python/Flask, PHP, REST APIs, Payment Integrations (Stripe, Square)

Databases: PostgreSQL, MariaDB, MongoDB, Redis, Elasticsearch, Flyway Migrations

Cloud & DevOps: AWS (EC2, ECS, Route53, S3), Docker, Kubernetes, Helm, GitHub Actions, Jenkins, Ansible, Linux, Nginx

Testing & Performance: Jest, PHPUnit, Optimizely (A/B Testing), Core Web Vitals, PageSpeed Insights, DebugBear, Technical SEO

Practices: Agile/Scrum, Code Review, Mentoring, SOLID, AI-Assisted Development (Claude)

EXPERIENCE

Senior Software Engineer

Mar 2023 – Present

Trader Interactive, Virginia Beach, VA

- Helped lead the re-branding and platform migration of Boatline.com to Boatmart.com, moving the product from a Laravel/Next.js application onto a shared platform built with MariaDB, PHP, Node.js, and Vue, and finished the PHP libraries the migration depended on.
- Partner with senior developers and architects to migrate a custom PHP framework to Nuxt.js, implementing SSR/SSG, Pinia state management, and Nuxt server routes for lightweight backend endpoints and proxy services.
- Improve Core Web Vitals and page performance with code splitting and lazy loading, using PageSpeed Insights and DebugBear to find and fix bottlenecks.
- Own technical SEO through platform migrations, including structured data (JSON-LD), canonical URLs, 301 redirects, and sitemaps, preserving search rankings and crawlability.
- Run controlled feature experiments with Optimizely, validating changes with real user data before full rollout.
- Built the initial prototype of the Inventory Advisor feature on the vehicle detail page (VDP), then handed it off to a Level 2 developer to complete and ship.
- Built GitHub Actions pipelines to automate deployments, and manage production assets in AWS S3.
- Extend shared PHP library repositories with new features and PHPUnit tests, using Claude AI to find bugs and write complex unit tests.
- Served as Scrum Master, leading daily standups and supporting sprint planning and Agile ceremonies.
- Mentor and onboard junior developers, perform code reviews, assist with releases, and helped evaluate candidates and select the team's current Level 2 developer.

Founder & Full Stack Engineer

Sep 2022 – Present

GrubStack (SaaS), Gates, NC

- Founded and built a subscription-based SaaS suite for food ordering: a React/Next.js customer dashboard and ordering app backed by a Python/Flask REST API.

- Built a customer dashboard for configuring payment integrations, launching software deployments, and managing subscriptions.
- Designed an abstract payment class that processes payments through Square or Stripe behind a single interface.
- Architected a Kubernetes cluster with a private Docker registry, deploying each customer app with Helm and adding nodes on demand.
- Automated re-deployment of every customer app with Jenkins on each release, and manage database schema changes with Flyway migrations.
- Implemented SSR for the production website and ordering app.
- Operate the platform in production: monitor uptime, maintain servers, and write and maintain documentation.

Full Stack Developer
Oct 2022 – Mar 2023

Emergent Cybernetics, Remote, USA

- Developed finance applications using Next.js and React.
- Containerized applications with Docker and wrote Ansible scripts to automate deployments.
- Built CI/CD deployment pipelines in Jenkins.

Full Stack Developer / DevOps Engineer
Feb 2019 – Oct 2022

xTuple, Norfolk, VA

- Built a customer portal with a React front end and a Python/Flask API for ERP software customers.
- Built a private, Dropbox-integrated application for secure file sharing.
- Managed customer server instances on AWS EC2, configured security policies, and updated DNS in Route53.
- Automated infrastructure tasks with Ansible, Bash, and Jenkins, and performed ERP software upgrades for customers.
- Managed on-site servers for local backups and other on-premise services.

ADDITIONAL EXPERIENCE

Linux System Administrator — TEKsystems, Virginia, USA Nov 2018 – Feb 2019

Linux System Administrator — Five Rivers Services, Virginia, USA May 2018 – Nov 2018

Tier2C Linux System Administrator Manager — InMotion Hosting, Virginia Beach, VA Dec 2015 – May 2018

EDUCATION

College of the Albemarle, Elizabeth City, NC Aug 2008 – May 2012

Associate's Degree, General Education

President's List & Dean's List every semester; 3.7 GPA.
