SUMMARY

Senior full-stack engineer who ships production platforms end to end, from React/Next.js front ends through Kubernetes infrastructure. Led SEO-safe platform migrations, improved performance at scale, and recently launched an AI SaaS (Instora.io) on Vercel with Supabase and a SaaS food ordering app (GrubStack.app) on a self-managed Kubernetes cluster.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, PHP, HTML5, CSS3, Bash
Frontend: React, Next.js, Vue 3, Nuxt.js, SSR/SSG, Material UI, Less/SASS, Responsive Design
Backend & APIs: Node.js, Python/Flask, PHP, REST APIs, Stripe Subscriptions, Square Payments
Databases: PostgreSQL, Supabase (RLS), MariaDB, MongoDB, Redis, Elasticsearch, Flyway
Cloud & DevOps: AWS (EC2, ECS, S3, Route53), Vercel, Docker, Kubernetes, Helm, GitHub Actions, Jenkins, Ansible, Nginx, Linux, Sentry
Testing & Performance: Jest, PHPUnit, Optimizely (A/B testing), Core Web Vitals, DebugBear, Technical SEO
AI: Anthropic Claude API (LLM integration)

EXPERIENCE

Senior Software Engineer
Mar 2023 – Present

Trader Interactive, Virginia Beach, VA

- Co-led the rebrand and platform migration of Boatline.com to Boatmart.com, moving the product from a Laravel/Next.js application onto a shared MariaDB, PHP, Node.js, and Vue platform.
- Built the core boat PHP library the migration depended on and extended several shared PHP libraries with missing functionality, with PHPUnit test coverage for each feature.
- Develop the server-rendered Nuxt.js application replacing a custom PHP framework, implementing SSR/SSG, state management, and server routes for lightweight backend endpoints and proxy services.
- Co-authored the initial GitHub Actions deployment workflows for the new SSR application; manage production assets in AWS S3.
- Improve Core Web Vitals and page performance through code splitting and lazy loading, using PageSpeed Insights and DebugBear to diagnose and fix bottlenecks.
- Own technical SEO across platform migrations, including structured data (JSON-LD), canonical URLs, 301 redirects, and sitemaps, preserving search rankings and crawlability.
- Run A/B experiments with Optimizely to validate product changes against real user data before full rollout.
- Designed and prototyped the Inventory Advisor feature on the vehicle detail page (VDP), then mentored a Level 2 developer through completing and shipping it.
- Served as Scrum Master for a six-person team, leading daily standups, sprint planning, and Agile ceremonies.
- Mentor and onboard junior developers (5+ to date), review 10+ pull requests per week, and support releases; helped evaluate candidates and select the team's current Level 2 developer.

Full Stack Developer
Oct 2022 – Mar 2023

Emergent Cybernetics, Remote

- Developed finance applications using Next.js and React.
- Containerized applications with Docker and wrote Ansible scripts to automate deployments.
- Built CI/CD deployment pipelines in Jenkins.

Full Stack Developer / DevOps Engineer
Feb 2019 – Oct 2022

xTuple, Norfolk, VA

- Built a customer portal with a React front end and a Python/Flask API for ERP software customers.
- Built a private, Dropbox-integrated application for secure file sharing.
- Managed customer server instances on AWS EC2, configured security policies, and updated DNS in Route53.
- Automated infrastructure tasks with Ansible, Bash, and Jenkins, and performed ERP software upgrades for customers.

Linux Systems Administration Dec 2015 – Feb 2019

InMotion Hosting (Tier 2C Linux System Administrator Manager), Five Rivers Services, TEKsystems — Virginia

PROJECTS

Instora — Founder & Full Stack Engineer Aug 2026 – Present

AI marketing SaaS for real estate agents — instora.io

- Built and launched solo in about two months: an AI marketing SaaS that turns a single real estate listing into SEO listing copy, social posts, video walkthrough scripts, and a lead-capturing listing page.
- Integrated the Anthropic Claude API for all content generation, built on Next.js, Supabase, and Vercel.
- Designed multi-tenant security with Supabase row-level security for agent and team accounts, and implemented Stripe subscription billing across three paid tiers with a free first listing to drive sign-ups.
- Built lead capture end to end (public listing and agent pages, QR codes for flyers and open houses, a unified leads inbox), plus automated weekly summary emails and Sentry error monitoring; now onboarding beta users.

GrubStack — Founder & Full Stack Engineer Sep 2022 – Present

Restaurant online-ordering SaaS — grubstack.app

- Designed, built, and launched a four-application platform (Python/Flask REST API, React/Next.js dashboard, web ordering app, terminal app) with a pluggable payment layer supporting Square and Stripe, including Stripe and Square card reader hardware for in-person payments.
- Integrated the Anthropic Claude API into the dashboard to generate menu item descriptions and branding copy, and added a Slack integration for notifications.
- Built per-customer Kubernetes deployments with Helm charts and a private Docker registry, with Jenkins pipelines for all four apps and Flyway-managed schema migrations.

EDUCATION

College of the Albemarle, Elizabeth City, NC

Associate's Degree, General Education — President's List & Dean's List every semester; 3.7 GPA
